

IN THE ABSTRACT OF THE DISCLOSURE:

~~The present invention aims to provide a practical polyester~~
~~that can be~~ A polyester composition ~~produced substantially~~ without
using an antimony compound as a polycondensation ~~catalyst.~~ catalyst
and including

(I) ~~The present invention provides a polyester resin~~ composition
containing, on a weight basis, 30 ppm or less of antimony, 0.5 to
50 ppm of titanium, and 0.1 to 100 ppm of phosphorus, in which the
number density of titanium-containing particles, the equivalent
circular diameter of which is 1 μm or more, is less than 100/0.02
mg; and

(II) ~~The present invention provides a polyester resin~~ composition
containing, on a weight basis, antimony, titanium and phosphorous
as defined above, in which organic polymer particles are contained
in amount of 0.1 to 5 wt%, the organic polymer particles having an
average particle diameter determined by dynamic light scattering of
0.05 to 3 μm and containing 0.01% or less of coarse particles
relative to the total number of the particles, the coarse particles
having a diameter at least twice the average particle diameter.
